Mobile app

Key benefits of the NextBike mobile app

Overview of real time availability
of bicycles and docks at the
stations

Rental history along with distance
travelled and CO2 savings

Comments on the rental and
provide **feedback**

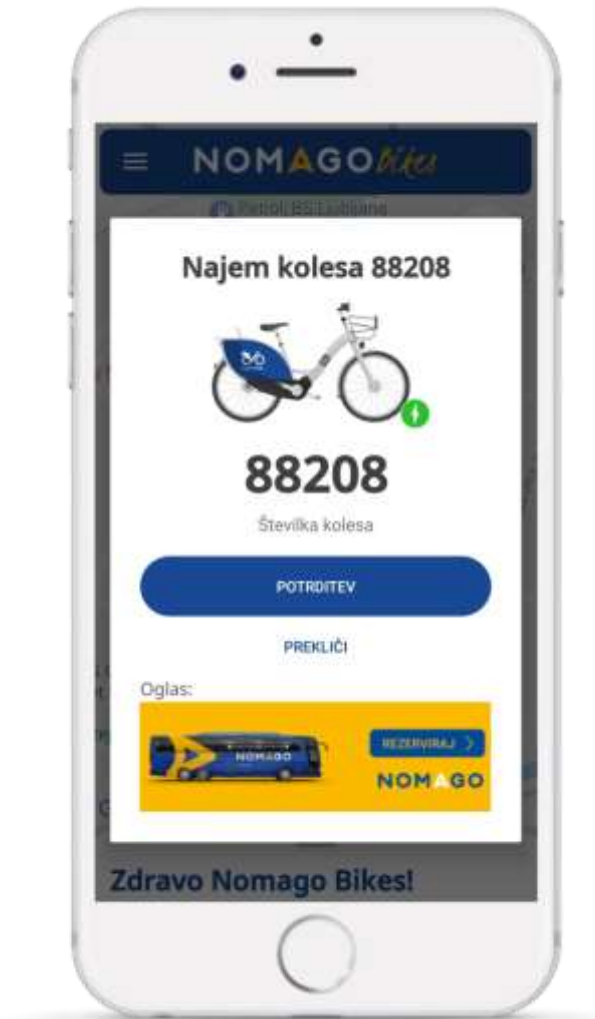

Registration, user account
settings and rental history

Easy bike rental process via bike
number or QR code in less than
3 seconds

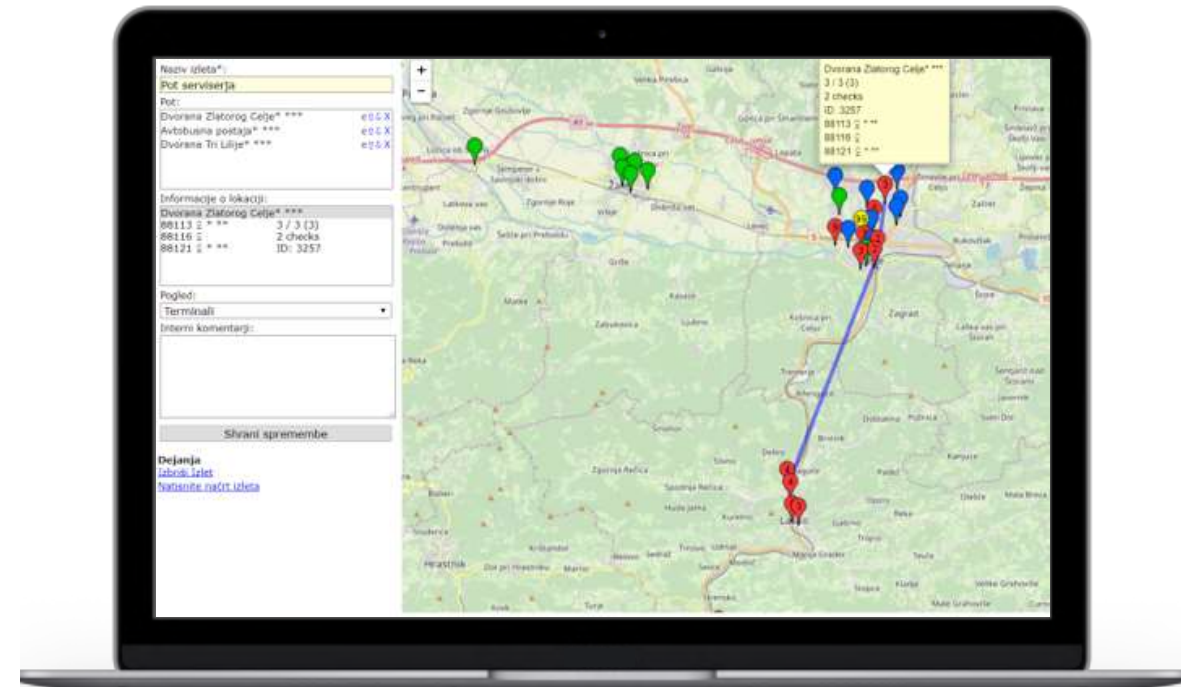

It works in **Slovenian, English,**
Croatian, Italian and more than
10 foreign languages

System Administration

Backend office

- ✓ **Cloud based system, multi-user access**
- ✓ Comprehensive overview of the database (users, rentals, bicycles, stations) on visual **Dashboard**
- ✓ **In-depth analysis** (access to detailed analytics with more than 50 data categories, daily / monthly report interval, number of registrations, leases, returns, new and regular customers, average rental duration, movement reports, servicing, bicycle inspections, rental amounts, payments with credit cards and cash)
- ✓ Provides support for customer relationship management (**CRM**) and content management (**CMS**)
- ✓ **System control via backend 24/7**; monitoring the movement of wheels and the operation of stations and the condition of batteries on wheels, etc.
- ✓ **24/7 call center** available via phone, e-mail and app support, with access to the functions of the back-end system for quick help to users
- ✓ **Compliance with all necessary legislation!**

System integration

Worldwide references

System integration via already developed input and output API connection – RFID/NFC cards

- Public Transport
- Smart city services
- Hotel and destination cards
- Workplace contactless cards

Support for employers in promoting a healthy mode of transport to work and after work

Numerous references from more than 200 cities from 30 countries around the world (EU, USA, NZ, India):

- Cologne - integration with KVB (public transport)
- Stuttgart - integration with a smart public transport card
- Budapest - integration with BKK (public transport)
- More than 20 cities in Croatia and Bosnia and Herzegovina

Mobility hub – space for integrated public and shared mobility

- different and connected transport modes
- facilities and information features to attract and benefit the traveller
- areas providing services to connect people through sustainable travel

Components:

- **Public transportation:** bus, rail, on-demand ride sharing
- **Shared Mobility:** bike share, cargo bike share, car share, scooter share
- **Mobility related:** digital pillar, journey planning service, registration and ticketing, customer services, electric car charging, bike parking and charging, last-mile delivery
- **Non-Mobility:** Package delivery, cafe shops, waiting area, Wi-Fi, phone charging

Jelbi station at Berliner Verkehrsbetriebe (BVG)

Micromobility hub

- Combining different modes in one place
- Supported with MAAS platform
- User and operations benefits
- Can be a part of Mobility Hub, PT stations or P+R facilities

What will the future of bike sharing look like?

- Electric or regular bikes?
- What is more important for good bike sharing – hardware or software?
- What will be the future of Micromobility - docked, dockless or hybrid systems?
- What is the most popular way of renting the bike – via Kiosk terminal, Mobile app or Smart Card?
- Cargobikes, kids bikes, tandems in bike sharing?

The future of Micromobility
